## **Tomorrow's ocean explorers: learning for a marine career**

V14N2 Summer 2019

The summer 2019 issue of the *Journal of Ocean Technology* will focus on marine education. This includes experiential learning, project-based learning, innovation literacy, creative teaching methods and student supports, collaborative practices, comparative methodologies, ocean literacy, etc. We are inviting the submission of technical papers, essays, and short articles for this issue.

Technical papers describe cutting edge research and present the results of new (i.e., not previously published) research in ocean technology, science or engineering, and be no more than 7,500 words in length. **Student papers are welcome.**

Essays present well-informed observations and conclusions, and identify key issues for the oceans community in a concise manner. They are written at a level that would be understandable by a non-specialist. As essays are less formal than a technical paper, they do not include abstracts or a listing of references. Typical essay lengths are up to 3,000 words.

### **Important deadlines**

Technical paper submissions: February 22, 2019

Expressions of interest for essays or short articles: February 22, 2019 (deadline for submission of materials is April 26)
